IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: Fish captured with Gee minnow trap baited with disinfected salmon eggs, 1-2 hour soak time. Trap coordinates determined by GPS - Garmin XL12 w/external antenna, averaged to <30' position error. No barriers detected between coho salmon location and upper cutthroat trout location.
